stockholm home to the author and also known as beauty on the sea has much to offer including a rare insight into ship construction and architecture in the early seventeenth century sweden was busy building an empire around the baltic sea in northern europe and a strong navy was essential

during the 1620s Sweden was at war with Poland and in 1625 the Swedish King Gustavus Adolphus ordered new warships among them the Vasa. The Vasa was built at the Stockholm shipyard by Henrik Hybertsson an experienced Dutch shipbuilder in the seventeenth century. However, architectural drawings and engineering specifications did not exist. Instead of using calculations, shipbuilders used so-called reckoning which recorded certain ship measurements. The reckoning used in building the Vasa were intended for smaller ships with only one gun deck. The Vasa was built quite differently when in 1628 in the presence of spectators among them foreign diplomats the Vasa heeled over and sank on its maiden voyage. The experience of the master builder and the skills of the carpenters he employed were not much above what we today would call the component level of the time. The knowledge of buoyancy, ballast, center of gravity and stability was basic at best.

A system comprises multiple views such as strategy, version n, strategy, version n-1, concept, analysis, design, implementation, structure, behavior, and input/output data views. A system's model is required to describe and represent all these multiple views. The system's model describes and represents the system multiple views possibly using two different approaches. The first one is the non-architectural approach and the second one is the architectural approach. The non-architectural approach respectively picks a model for each view. The architectural approach instead of picking many heterogeneous and unrelated models will use only one single multiple views coalescence MVC architecture model. In general MVC architecture is said to be synonymous with the system's architecture since structure and behavior views are the two most prominent ones among multiple views. Integrating the structure and behavior views becomes a superb approach for integrating multiple views of a system. In other words, structure behavior coalescence (SBC) leads to the coalescence of multiple views. Therefore, we conclude that SBC architecture is also said to be synonymous with the system's architecture. System's architecture is emerging as an important discipline for hardware, software, enterprise, knowledge, or thinking systems modeling and architecting. This book focuses on the SBC architecture which consists of a SBC architecture description language (SBC ADL), a SBC architecture development method (SBC ADM), and a SBC view model (SBC VM). An architecture description language is a special kind of language used to describe the architecture of a system. SBC ADL uses six fundamental diagrams to formally grasp the essence of a system and its details at the same time. These diagrams are: a) architecture hierarchy diagram, b) framework diagram, c) component operation diagram, d) component connection diagram, e) structure behavior coalescence diagram, and f) interaction flow diagram. The iterative and cyclic ADM being used by a system's architect to accomplish each version management of the system's architecture shall do the strategic management first and then go through the concept, analysis, design, and implementation phases of system's architecture construction. Every phase checks with the requirements to make sure that each version of the constructed system's architecture is what the users want. A view model is a three-dimensional matrix representation of a system's multiple views. In the SBC view model, dimension 1 stands for the evolution, motivation view which contains the strategy, version 1, strategy, version 2, strategy, version 3, strategy, version 4, and

strategy version i infinite views dimension 2 stands for the multi level hierarchical view which contains the concept analysis design and implementation views dimension 3 stands for the systemic view which contains the structure behavior input output data views systems could be hardware software enterprise knowledge or thinking systems accordingly systems architectures could also be hardware software enterprise knowledge or thinking systems architectures depending on what systems are applied to systems architecture used for hardware software enterprise knowledge or thinking systems modeling and architecting is on the rise by this book s penetrating introduction and elaboration all readers shall clearly understand how the sbc architecture helps systems architects effectively perform architecting in order to productively construct fruitful hardware software enterprise knowledge or thinking systems architectures

human beings have employed the notion of systems so widely in all kinds of scientific studies systems definition is an artifact created by humans to describe what a system is a system has been defined by systems theory 1 0 hopefully to be an integrated whole embodied in its components their interrelationships with each other and the environment and the principles and guidelines governing its design and evolution this systems theory 1 0 definition of a system possesses one cardinal deficiency the deficiency comes from that it does not describe the integration of systems structure and systems behavior systems structure and systems behavior are the two most significant views of a system in order to achieve a truly integrated whole of a system we first need to integrate the systems structure and behavior together in other words integration of the systems structure and systems behavior results in the integration of a whole system since systems theory 1 0 does not describe the integration of systems structure and systems behavior very likely it only hopes and will never be able to actually form an integrated whole of a system in this situation systems theory 1 0 is powerless in defining a system suitably sbc i e structure behavior coalescence architecture provides an elegant way to integrate the structure and behavior of a system a system is therefore redefined by architectural theory systems theory 2 0 truly to be an integrated whole using the sbc architecture embodied in its assembled components their interactions or handshakes with each other and the environment and the principles and guidelines governing its design and evolution since architectural theory describes the integration of systems structure and systems behavior definitely it is able to form an integrated whole of a system in this
